About me

I have over three years of experience working as a web developer, specializing in React and TypeScript. I build dynamic, responsive applications, create custom components with WCAG accessibility, manage complex state with Context API, and integrate APIs efficiently. I am skilled in HTML, CSS, SCSS, React Router DOM, etc, and performance optimization, with experience on Vanilla JS too. On the back end, I have experience with Node.js, Express, and MySQL, designing relational databases and building APIs with authentication (JWT, cookies). While MySQL is my primary database, I have also worked with MongoDB. I focus on writing clean, maintainable code and integrating front-end and back-end systems effectively.

Saurus

Front-end

 since feb 2024

- I have the role of Front-end developer, working on several projects using diferents technologies. On the client side, implemented dynamic and efficient interfaces using, JavaScript and React for frontend logic. For the layout and styles, I used CSS, SCSS and the Material UI library, providing an attractive visual experience. I designing web interfaces from zero with multiple pages using React Router DOM. My proficiency extends to optimizing performance, implementing best practices, and build maintainable code I worked in collaboration with the development team.

Full stack

 jul 2023 - jan 2024

- I had the role of Full Stack developer, working on several projects using a wide range of technologies. On the client side, implemented dynamic and efficient interfaces using Vue and Nuxt, JavaScript and TypeScript for frontend logic. For the layout and styles, I used CSS and the Ant Design (AntD) component library, providing an attractive visual experience. On the server side, I built services with Node.js, using the Sequelize framework to interact with MySQL databases. This integration ensured efficient data management and a scalable architecture. I worked in collaboration with the development team.

Front-end

may 2023 - jul 2023

- Developed practical frontend skills by creating complete web pages using the React framework. During these internships, I implemented the Emotion layout library to achieve an efficient and scalable design. This approach allowed me to build modern web interfaces, optimizing the user experience and applying best practices in frontend development with React and Emotion.

Studies

Bootcamp Backend

Lemoncode

 jul 2023 - Present

In this Bootcamp I will cover cloud technologies and providers such as: NodeJS, Express, Mongoose, Mongo, GraphQL, .net, Entity Framework, SQL Server, TypeScript, C#, Heroku, Amazon, Azure

Technologies and Tools

Azure

GraphQL

Microsoft SQL Integration Services (SSIS)

MongoDB

Mongoose

NodeJS

TypeScript

Master Front-end

Lemoncode

 jan 2022 - jun 2022

Lemoncode Front-end Master in frontend development, where I acquired solid skills in HTML, CSS, JavaScript, Angular and React. I experimented with projects from the working world, thoroughly explored popular frameworks such as Angular and React, developing my skills in creating modern and highly interactive web applications.

Bootcamp

Pixelpro

 jan 2021 - may 2022

I successfully participated in the Pixelpro bootcamp, focused on frontend and backend development. Throughout the program, I honed my skills in HTML, CSS, JavaScript, and explored the Node.js environment to build complete web applications. This bootcamp provided me with a comprehensive understanding of development, allowing me to create projects from the front-end to the backend, thus preparing me to face challenges and contribute effectively to end-to-end web projects.
